

From the seed of an idea, nature can grow

The Seed Fund for communities in Cornwall

The Seed Fund aims to support small-scale projects that help create more space for nature within local communities, for example:

- Conversion or restoration of community greenspace to wildlife habitat: community orchards, ponds, wildflower meadows/verges, native hedges, trees or woodlands
- Environmental improvements to a community centre or village hall grounds: installation of bee bricks, bug hotels, swift boxes, nest boxes, tree planting
- Coastal and marine projects: no anchor zones, initiatives to reduce single use plastics
- Initiatives to help local people to connect with their environment.
- Activities which encourage people to grow nature and increase the public understanding and enjoyment of wildlife
- Local wildlife training and monitoring
- Schemes to reduce invasive species, litter, noise or light pollution
- Heritage restoration projects

Priority will be given to schemes which result in tangible examples of environmental growth, for example new habitats or an increase in the health of native wildlife.

Any locally constituted and recognised 'not for profit' organisation which seeks to serve the people of Cornwall could be eligible to apply.
